# Week 0-2

- Non-weight bearing with crutch use
- No knee scooter use

Megan R. Wolf, MD

#### Week 2-6

- Non-weight bearing in walking boot
- Begin active ankle ROM only
  - Dorsiflexion
  - Avoid passive inversion and eversion
  - o avoid full-range plantar flexion
- Intrinsic foot strengthening

#### Week 6-8

- Progress to FWB without assistive device with focus on normal gait patterning IN BOOT ONLY
- Remove boot for beginning open chain AROM exercises for dorsiflexion and 75% plantar flexion without resistance
- Add LE closed chain exercises, single plane
- Introduce proprioceptive exercises
  - Even ground only, no BAPS, BOSU or Wobble board
- Light soft tissue work

## Week 8-12

- Wean out of boot and into lace up ankle brace in athletic shoes IF full ankle ROM, adequate strength and gait pattern
- Normal gait patterning
- · Progress to full active range of motion, all directions

## Week 12-16

- Progress closed chain exercises
- Progress proprioceptive training
- Static and dynamic balance progressing to varied surfaces as patient is able
- Plyometric exercises introduced

#### Week 16+

- Jogging/Running introduced in brace
- Progress to plyometric program to include dynamic, multi-planar exercises
- Increase intensity and resistance in closed chain activities
- Functional return to activity
